

We appreciate that you have your hands full without the extra headache of user security. We've designed an Identity Governance and Administration (IGA) platform that can be used by everyone. No matter what your role or the number of identities you need to control, the ideiio platform delivers identity lifecycle management that is cost effective, quick to deploy and easy to manage.

Why choose ideiio.

Our customers pick ideiio because we make them feel confident in both our technical abilities and our understanding of their needs. Whether you have an existing identity management platform or are just starting on your journey, we make it our job to keep the process simple.

We believe that identity governance should be available to everyone, not just large enterprises with huge budgets and teams of in-house experts.

We have all heard the industry horror stories about costly projects taking years to complete and not delivering real value. ideiio is easy to deploy in a matter of weeks. Couple this with cost efficient licensing and an intuitive platform that does not require specialist in-house skills to manage, you end up with quicker time to value and lower costs of ownership.

Control

ideiio allows you to take control of the user lifecycle, with easily configured workflows.

Compliance

ideiio satisfies internal audit requirements to strengthen your security posture and reduce risk.

Empowerment

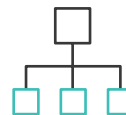

ideiio lightens the load on HR and IT by automating repetitive tasks and empowering users to manage their own identity.

Efficiency

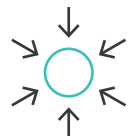

The ideiio solution is quick to deploy and provides huge benefits at a manageable price.

Inclusion

ideiio allows you to manage all of your staff, contractors and external users in a single, secure and intuitive system.

Integration

ideiio offers pain free integration to other platforms and applications.

Key features.

Identity lifecycle

Manage all employees, contractors and third parties in one place to ensure they have the right access, at the right time.

Provisioning

Automatically add or remove access to users based upon their role within the organization.

Roles

Enforce policies that define what access users should have, based upon their role within the organization.

Entitlements

Manage detailed user privileges within each application to improve data security.

Access review

Schedule reviews and automated scans to easily identify unnecessary access and take action to meet audit requirements.

Access request

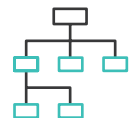

Easily handle requests for additional access, ensuring appropriate routing and approval, before being provisioned.

Self service

Allow users to update their information, review their current access and request additional access if required.

Delegation

Securely delegate the ability to request, manage and approve access to another person, department and/or office.

Whether you are looking to gain tighter control of your user accounts, reduce the strain on your IT team, improve security and compliance, or just want expert advice on how to achieve quicker value in a more cost effective way, ideiio can help.
